Aqualine Reagents

Our Fisher Chemical™ Aqualine™ Karl Fischer reagents portfolio is designed to meet the needs of the analytical chemist by providing accurate water content determination using volumetric or coulometric titration with unique benefits.

Aqualine coulometric range: for low water content at ppm level

Fisher Chemical Aqualine coulometric reagents are ideal for use in coulometric Karl Fischer titrations for detecting low concentrations of water. Our Aqualine anolyte and catholyte solutions have been re-formulated to offer better performance. The improved formulation increases both the speed and accuracy of titration when determining water content at microgram level.

Highlights:

- **Fast** – Reach the endpoint quickly
- **Convenient** – Long product shelf-life
- **Reliable** – Very stable endpoint

Aqualine coulometric range performance

Our Aqualine coulometric reagents contain a different base than Sigma-Aldrich™ HYDRANAL™ Coulomat A and Mitsubishi Chemical AQUAMICRON™ AX reagents. When compared to these reagents in terms of water recover and titration, Fisher Chemical™ Aqualine™ Electrolyte A displayed a more stable endpoint.

Speed titration performance

Figure 1: The speed of titration of a 1mL injection of methanol with Aqualine Electrolyte A was measured. A comparison was made versus HYDRANAL™ Coulomat A and AQUAMICRON™ AX reagents. Results indicate that Aqualine coulometric reagents are fast and accurate with a stable endpoint.

Aqualine water standard

We offer a series of long shelf-life Aqualine water standard reagents, which support the calibration of the Karl Fischer titrator instrument. Our water standard reagents are packaged in glass ampoules for your convenience.

Aqualine volumetric range: for high water content analysis

For the Karl Fischer titration by volumetry, we offer you the choice between single component reagents, two component reagents and reagents especially designed for aldehydes and ketones. **Our Aqualine reagents for Karl Fischer titration by volumetry perform identically to other Karl Fischer reagents on the market.**

Highlights:

- **Reliable** – Fast and stable endpoints ensure reliable and accurate results
- **Safe** – Low toxicity and pyridine free
- **Convenient** – Available as a one or two component solution

Aqualine volumetric range performance

When compared to Sigma-Aldrich™ HYDRANAL™ Composite 5 in terms of water recovery and speed titration, Fisher Chemical™ Aqualine™ Complete 5 showed identical results. The Aqualine volumetric range of products formulation is based on the HYDRANAL™ formulation using imidazole as base.

Figure 2: % Water recovery titration using THF solvent containing varying levels of water with Aqualine Complete 5 was performed. The comparison was made versus HYDRANAL™ Composite 5 using the same automated volumetric moisture meters without altering instrument setup. Results indicate that water content measurements were identical for both.

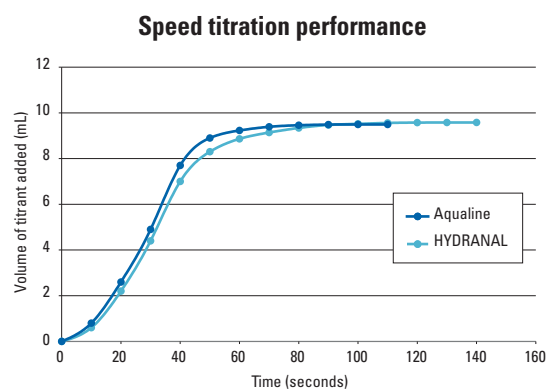

Figure 3: The speed of titration of 50µg water with Aqualine Complete 5 was recorded. The comparison was made versus HYDRANAL™ Composite 5 using the same automated volumetric moisture meters without altering instrument setup. Aqualine Complete 5 demonstrated faster and more stable endpoints versus HYDRANAL™ equivalent reagents.
